

TMC FERTILITY

Fertility GeneCode™

Couples experiencing infertility can often be associated with genetic factors. From inherited chromosomal abnormalities to gene mutations, both males and females have different outcomes from both these factors.

TMC Fertility's latest genetic screening, Fertility GeneCode™ helps our doctor to develop a personalized treatment plan that is suited to each individual, based on their genetic composition.

Benefits of Fertility GeneCode™

- 1 | Pharmacogenetics**
By identifying how genes affect a person's response to particular drugs, our doctor is able to develop effective, safe medications and doses that are tailored to each individual.
- 2 | Genetic and Hereditary Causes of Infertility**
Learn about current genetic conditions that can affect your ability to conceive & mitigate the risk of passing down genetic disorders to your children.
- 3 | Other Genetic & Hereditary Diseases: Carrier Screening**
Screen for other general genetic & hereditary diseases for better management of your health.
